

LABORATORY QUALITY POLICY

- For our leading organization in cable industry, Material Technology Test Laboratory targets which are situated in "Türk Prysmian Kablo ve Sistemleri" are;
- To provide competing advantage in the market by performing all the electrical and mechanical tests for our low voltage, medium voltage and high voltage, OEM, copper telecommunication and optical cables with most modern facilities and equipments in short time and high reliability.
- To perform the test services supplied to the customers within honesty principle, responsibility awareness, objectively, with professional, educated staff who are aware of laboratory policy and procedures and to preserve all the test results confidential.
- To assure the continuity of the calibrations of all the test equipments which are used in qualification scope of TS EN ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories" standard, within calibration plan, and to obtain reliable and accurate test results.
- To perform all the tests with current standards within TS EN ISO/IEC 17025 quality system fundamentals and customer demands.
- Laboratory management will fulfill all the TS EN ISO/IEC 17025 Quality System fundamentals and will continuously improve the system. The education and awareness activities of the Laboratory staff will continue regularly.
