

WHAT LINKS SAFETY AND PERFORMANCE IN LANDMARK STRUCTURES?

Cable systems to enhance elevator performance in the world's most notable buildings

Taking elevator safety and performance to new heights, Prysmian's elevator cable technology is deployed in some of the world's most famous structures. That includes specially engineered cables which allow the elevators in the Burj Khalifa – the tallest man-made structure in the world – to be among the fastest on the planet, at 40mph.

Through our Draka brand, the Group has been manufacturing elevator cables for over 35 years, and we now have manufacturing, distribution and sales facilities around the world, working 24 hours a day. This unrivalled experience and worldwide coverage allows us to deliver superior service, working in close proximity with our customers to arrive at customised solutions that not only exceed performance expectations but do so with exceptional safety, efficiency and simplicity.
